Dion Label Printing Installs Second MPS Servo Converting Press

Westfield, MA (December 28, 2015) - Dion Label Printing installed a second MPS Servo Converting Press to provide greater capacity and diversity in its product offerings.

The EF-430 Hybrid press allows printing on 17" wide substrates from thin films to heavy tag. The press uses both UV and water-based inks and has many rail-mounted accessories for multiple web configurations. Integrated CC1 controls deliver extremely precise and consistent registration. Both of Dion's MPS presses have also been equipped with AVT video inspection equipment. With high-speed, high-resolution line-scanners, these server-based systems monitor 100% of the web, providing operators with immediate feedback on possible defects while digitally mapping the results for editing on newly installed inspection equipment.

Dion's first MPS press was purchased in 2008.

“This press has definitely exceeded expectations and will surely extend our ability to meet our customers’ challenges in the years ahead.” - John Dion

Dion Label Printing, Inc is a digital and flexographic label printer located in Westfield, MA. Dion prints labels, shrink sleeves, pouches and specialty medical products for multiple industries. Dion Label Printing is a leader in the packaging industry with two HP Indigo presses, 5 flexographic presses, shrink sleeve equipment, sustainable practices and print options as well as finishing options including hot stamping, cold foil, silk screening, embossing, and specialty coatings.
